

ACCESS 7.0 DESIGN AND DEVELOPMENT

FIVE DAYS

Prerequisites

This class is intended for those who have some prior exposure to relational database technology. Experience with SQL would be beneficial, but is not mandatory. Exposure to other Windows applications would also be helpful.

Who Should Attend

This course is designed for individuals who want to design and develop database applications using Access 7.0. This course is geared towards Database Developers and Programmers who have a general data processing background and some programming experience. No prior Visual Basic for Applications programming experience is required to attend this course.

Course Description

Access 7.0 Design and Development explains how to create sophisticated database applications using the powerful Access facilities. The course covers in detail the creation of Tables, Queries, Reports, Forms, Macros and Modules. The Visual Basic for Applications language will be used to show how to create sophisticated Access applications.

Course Topics

- Understanding Microsoft Access Basics
- Building a Database
- Working with Data
- Using Forms
- Creating Reports
- Creating an Application
